

# **NTPEP**

## **SAPL TC**

**Monday, June 5, 2017 10:00am to 11:00am**

### **Conference Call**

#### **Agenda**

Introductions - All

Discussion Items:

1. Testing Lab Status:

- a. Three Laboratories submitted proposals
- b. TEC in Atlanta, GA was chosen to perform the testing.
  - i. They are able to perform all testing and were the most cost effective option
- c. The approximate costs for testing will be:
  - i. \$2,360 for resin testing
  - ii. \$3,880 for cementitious testing
  - iii. \$10,695 for T280 three edge bearing test (D-load)
    - 1. Includes concrete pipe
  - iv. \$2,080 for D2412 parallel plate test
    - 1. Includes sonotube

2. Datamine Status:

- a. Is currently being developed
- b. A draft design document was presented to the committee
- c. Suggested additions were added and the document was submitted to engineering

- d. The development of the module should be completed by early fall 2017.
- e. The first submission cycle for product evaluation will open October 1, 2017

3. Other concerns?

- a. Cementitious material can vary depending on where it is manufactured and what aggregate is available in the area.
- b. The DataMine application will have manufacturers list the location of where the product was manufactured.
  - i. More discussion may be needed on this topic
  - ii. Check with the RSCP TC and see how they handle these issues.

4. What's next?

- a. States need to get letters out to their suppliers that they will be requiring NTPEP SAPL evaluations.
